

Energy XDR

Comprehensive Digital Security Solution

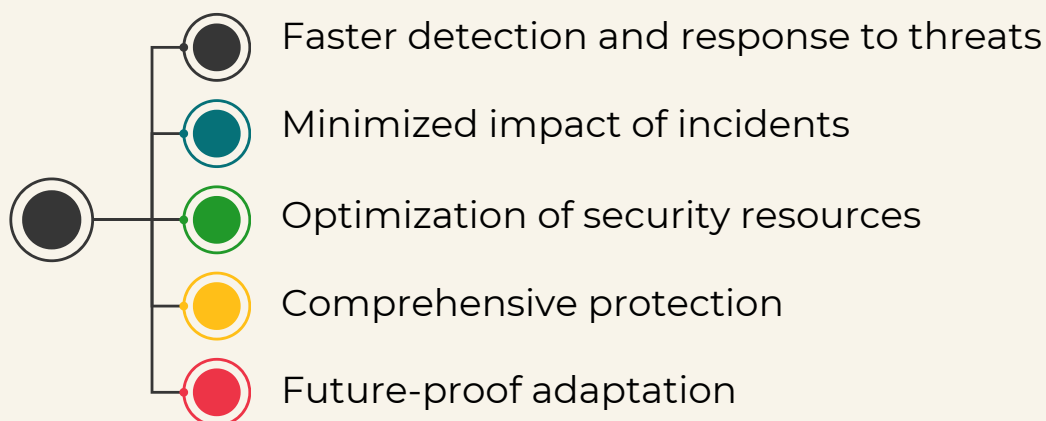

Energy XDR is an advanced platform for threat detection and response. It integrates key technologies from the Energy portfolio:

- Energy Logserver
- Energy SOAR
- Energy Network Probe
- Empowered AI - Innovative solutions based on artificial intelligence.

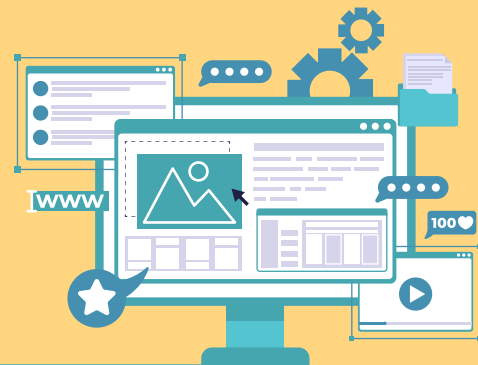

Provides comprehensive protection against advanced and dynamically changing cyber threats.

Benefits for the Organization

Energy XDR

Key functionalities

ENERGY LOGSERVER: A MODERN SIEM WITHOUT LIMITS

- A powerful SIEM tool for analyzing and correlation of data from various source
- enables quick detection of threats
- Strengthens detection, integrity monitoring, vulnerability detection and active EDR responses
- key to modern organizational security management

1

ENERGY SOAR: AUTOMATION AND INTEGRATION WITH SECURITY SYSTEMS

- Improves incident response by automating security processes and orchestrating operations
- integrated with a variety of security tools
- Enables coordination of countermeasures to detected threats, reducing response time

ENERGY NETWORK PROBE: ADVANCED NETWORK TRAFFIC ANALYSIS

- deep analysis of network traffic, identifying behavior
- users and detecting signature and non-signature attacks
- Analyzes NetFlow-type traffic, which allows for detailed understanding of and monitor the activity of

3

EMPOWERED AI:

ARTIFICIAL INTELLIGENCE IN THE FORECASTING AND ANOMALY DETECTION SERVICE

4

- use of machine learning algorithms for threat analysis and prediction, affects early detection of potential attacks based on numerical and textual analysis
- Identification of anomalies in data sets, helps in the rapid identification of threats and influences on optimizing the response

Energy XDR is the future of digital security management, offering not only advanced tools to combat cyber threats, but also providing a sense of security through comprehensive and effective protection.
