

Energy Monitor

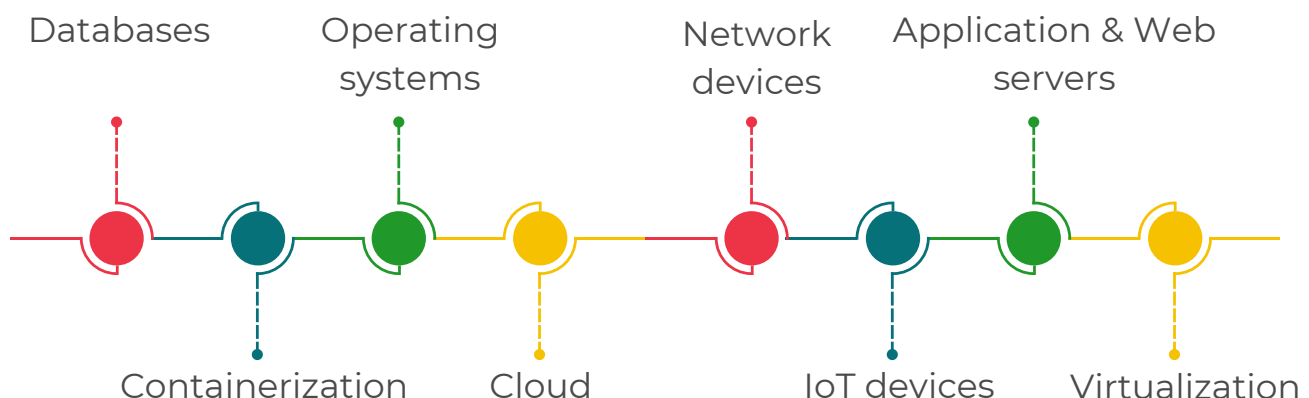

Monitor. Control. Optimize.

- Integration with existing IT systems via API
- Advanced notifications and problem escalation
- Customizable reports and dashboards
- Monitoring of networks, servers, devices and applications
- Full compatibility with Open Source

Energy Monitor is an advanced solution designed to IT infrastructure monitoring. It provides an overview of the performance and security of systems, enabling efficient management of IT resources and minimizing downtime.

Monitored systems

Energy Monitor

Monitor. Control. Optimize.

Extended benefits

Quick identification

1

Improve uptime of systems by quickly identifying and resolving problems.

2

Increase productivity

Improve IT efficiency by monitoring trends and preventing failures.

3

Flexibility

Flexibility in configuration to suit a variety of IT environments.

Cost reduction

Reduce operating costs through more efficient management of resources.

4

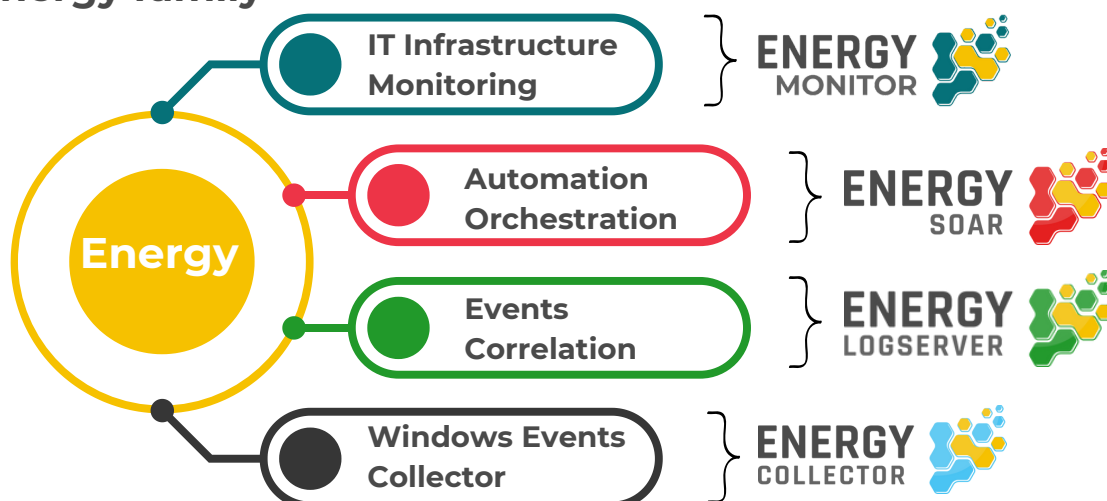

5

Security enhancement

Enhancing security through continuous monitoring and alerting on errors.
